

# DC/DC CONVERTERS

## 28 VOLT INPUT

### FEATURES

- -55° to +125°C operation
- 16 to 40 VDC input
- Fully isolated
- Magnetic feedback
- Fixed frequency 600 kHz typical
- Topology – Single Ended Forward
- 50 V for up to 50 ms transient protection
- Inhibit and synchronization functions
- Indefinite short circuit protection
- Up to 30 watts output power
- Trim and remote sense on single output models
- Up to 84% efficiency

MODELS		
VDC OUTPUT		
SINGLE	DUAL	TRIPLE
3.3	±5	+5 &
5	±12	±12
12	±15	+5 &

18		

Size (max): Non-flanged: Single and dual output models, case H2 (H4 for MTR Dual with standard or ES screening, ht 0.417", 10.59 mm)  
 2.125 x 1.125 x 0.400 inches (53.98 x 28.58 x 10.16 mm)  
 Triple output models, case F1, 1.950 x 1.350 x 0.405 inches (49.53 x 34.29 x 10.29 mm)  
 Flanged: Single and dual output models, case K3 (or K5 for MTR Dual with standard or ES screening, ht. 0.417", 10.59 mm)  
 2.910 x 1.125 x 0.400 inches (73.91 x 28.58 x 10.16 mm)  
 Triple output models, case J1, 2.720 x 1.350 x 0.405 inches (69.09 x 34.29 x 10.29 mm)

Weight: Single and dual non-flanged 50 grams max., flanged 52 grams max.  
 Triple non-flanged 58 grams max., flanged 62 grams max.

Screening: Standard, ES, or 883 (Class H).

### DESCRIPTION

The MTR Series™ of DC/DC converters offers up to 30 watts of output power from single, dual, or triple output configurations. They operate over the full military temperature range with up to 84% efficiency. MTR converters are packaged in hermetically sealed metal cases, making them ideal for use in military, aerospace and other high reliability applications.

### CONVERTER DESIGN

The MTR converters are constant frequency, pulse-width modulated switching regulators which use a quasi-square wave, single ended, forward converter design. Tight load regulation is maintained via wide bandwidth magnetic feedback and, on single output models, through use of remote sense. On dual output models, the positive output is independently regulated and the negative output is cross regulated through the use of tightly coupled magnetics and shunt regulators. The MTR Series triple output DC/DC converter's design includes individual regulators on the auxiliary outputs which provide for no cross regulation error when a minimum 500 mA load is maintained on the main (+5) output.

Indefinite short circuit protection and overload protection are provided by a constant current-limit feature. This protective system senses current in the converter's secondary stage and limits it to approximately 115% of the maximum rated output current.

MTR converters are provided with internal filtering capacitors that help reduce the need for external components in normal operation. For systems that require compliance with MIL-STD-461C's CE03 standard, Interpoint offers filter/transient suppression modules (including the FMC-461, FMD-461 and FM-704A series filters) which will result in compliance. Contact your Interpoint representative for further details.

### SYNCHRONIZATION

Synchronizing the converter with the system clock allows the designer to confine switching noise to clock transitions, minimizing interference and reducing the need for filtering. In sync mode, the converter will run at any frequency between 500 kHz and 675 kHz. The sync control operates with a quasi-TTL signal at any duty cycle between 40% and 60%. The sync pin must be connected to input common pin when not in use.

### WIDE VOLTAGE RANGE

MTR converters are designed to provide full power operation over a full 16 to 40 VDC voltage range. Operation below 16 volts, including MIL-STD-704E emergency power conditions is possible with derated power. Refer to the low line dropout graph (Figure 22) for details.

### IMPROVED DYNAMIC RESPONSE

The MTR Series feed-forward compensation system provides excellent dynamic response and noise rejection. Audio rejection is typically 50 dB. The minimum to maximum step line transient response is typically less than 4%.

### INHIBIT FUNCTION

MTR converters provide an inhibit terminal that can be used to disable internal switching, resulting in no output and very low quiescent input current. The converter is inhibited when a TTL compatible low ( $\leq 0.8$  V) is applied to the inhibit pin. The unit is enabled when the pin, which is internally connected to a pull-up resistor, is left unconnected or is connected to an open-collector gate. The open circuit output voltage associated with the inhibit pin is 9 to 11 V. In the inhibit mode, a maximum of 8 mA must be sunk from the inhibit pin.

# MTR SERIES

## 30 WATT

# DC/DC CONVERTERS

### ABSOLUTE MAXIMUM RATINGS

- Input Voltage**
- 16 to 40 VDC
- Output Power**
- 25 to 30 watts depending on model
- Lead Soldering Temperature (10 sec per pin)**
- 300°C
- Storage Temperature Range (Case)**
- -65°C to +135°C

### RECOMMENDED OPERATING CONDITIONS

- Input Voltage Range**
- 16 to 40 VDC continuous
  - 50 V for 50 msec transient
- Case Operating Temperature (Tc)**
- -55°C to +125°C full power
  - -55°C to +135°C absolute
- Derating Output Power/Current**
- Linearly from 100% at 125°C to 0% at 135°C

### SYNC AND INHIBIT

- Sync (500 to 675 kHz)**
- Duty cycle 40% min, 60% max
  - Logic low 0.8 V max
  - Logic high 4.5 V min, 5 V max
  - Referenced to input common
  - If not used, connect to input common
- Inhibit TTL Open Collector**
- Logic low (output disabled)  
Voltage  $\leq 0.8$  V  
Inhibit pin current 8.0 mA max
  - Referenced to input common
  - Logic high (output enabled)  
Open collector

### TYPICAL CHARACTERISTICS

- Output Voltage Temperature Coefficient**
- 100 ppm/°C typical single and dual outputs
  - 200 ppm/°C main, 300 ppm/°C aux triple output
- Input to Output Capacitance**
- 50 pF typ (100 pF typ triple outputs)
- Current Limit**
- 115% of full load typical
- Isolation**
- 100 megohm minimum at 500 V
- Audio Rejection**
- 40 dB typ (50 dB typ triple output)
- Conversion Frequency**
- Free run 550 min, 600 typ, 650 max kHz
  - External sync 500 to 675 kHz
- Inhibit Pin Voltage (unit enabled)**
- 9 to 11 V

### Electrical Characteristics: 25°C Tc, 28 VDC Vin, 100% load, free run, unless otherwise specified.

## Notes

- Tc = -55°C to +125°C.
- Up to 90% of the total output current/power is available from either output providing the positive output is carrying at least 10% of the total output power.
- Operation is limited below 16 V (see Figure 22).
- Effect on the negative output under the following conditions:  
+P<sub>out</sub> 20% to 80%; -P<sub>out</sub> 80% to 20%
- Effect on the negative output under the following conditions:  
+P<sub>out</sub> 50%; -P<sub>out</sub> 10% to 50%
- Indefinite short circuit protection not guaranteed above 125°C case.
- Recovery time is measured from application of the transient to point at which V<sub>out</sub> is within 1% of final value.
- Transition time ≥ 10 µs.

**Electrical Characteristics: 25°C Tc, 28 VDC Vin, 100% load, free run, unless otherwise specified.**

**Notes**

- The sum of the two aux outputs is not to exceed 10 watts. The maximum load per aux output is 9 watts.
- To maintain regulation when operating the ±Aux at full load, a minimum load of 500 mA is required on the main.
- Measured on each output one at a time with the other outputs at full load.
- Indefinite short circuit protection not guaranteed above 125°C (case).
- Response of each output as all outputs are simultaneously transitioned.  
Main: 50% - 100% - 50% of main full load  
Auxiliaries: 25% - 50% - 25% each, of total auxiliary full load
- Recovery time is measured from application of the transient to point at which Vout is within 1% of regulation.

## TRIM AND REMOTE SENSE (AVAILABLE ON SINGLE OUTPUT MODELS ONLY)

**EXTERNAL TRIM CONNECTION**  
 1 Make connections at converter.

**FIGURE 1: TRIM CONNECTION<sup>1, 2, 3</sup>**

Trim Formulas

$V_{out}$  = desired output voltage;  $R_t$  = trim resistor

3.3V:  $R_t = \frac{1300 * V_{out} - 4304}{1.2475}$

5V:  $R_t = \frac{1300 * V_{out} - 6512}{1.2475}$

12V:  $R_t = \frac{1300 * V_{out} - 15631}{1.2475}$

15V:  $R_t = \frac{1300 * V_{out} - 19498}{1.2475}$

**REMOTE SENSE CONNECTION**  
 2 Make connections at load.

**FIGURE 2: REMOTE SENSE<sup>2, 3</sup>**

Notes for Remote Sense and Trim

- When trimming output voltage and/or remote sensing, the total output voltage increase must be less than 0.6 volts at the converters pins to maintain specified performance.
- If neither voltage trim nor remote sense will be used, connect pin 3 to pin 4 and pin 5 to pin 6 or the output voltage will increase by 1.2 volts.
- CAUTION:** The converter will be permanently damaged if the positive remote sense (pin 6) is shorted to ground. Damage may also result if the output common or positive output is disconnected from the load with the remote sense leads connected to the load.
